

Van Ausdall & Farrar, Inc. Leverages New Vulnerability Management Technology to Secure Customer Networks

Leading Managed Technology Services Provider (MTSP) Is at the Forefront of Protecting the Region's Organizations

INDIANAPOLIS, IN – August 27, 2024 - Van Ausdall & Farrar, Inc. a leading managed technology services provider (MTSP), proudly announced the deployment of advanced vulnerability management technology designed to enhance the security and resilience of customer IT networks. This new initiative underscores Van Ausdall & Farrar, Inc.'s commitment to safeguarding the region's organizations against evolving cyber threats.

In an era where cybersecurity threats continue to become increasingly sophisticated, Van Ausdall & Farrar, Inc.'s vulnerability management solution is serving business owners as a crucial line of defense. This system provides continuous scanning and monitoring of client networks to identify and mitigate potential weaknesses, on a proactive basis, essentially thwarting hackers before they spot an opportunity to attack.

As soon as a new asset is added to a customer's network, Van Ausdall & Farrar, Inc.'s technology initiates a thorough scan using multiple techniques and scan engineers. Open ports are examined for running applications, and specific exploit payloads are tested against relevant services.

This includes operating system (OS) detection, service detection, Secure Sockets Layer (SSL) checks, authentication checks, Common Vulnerabilities and Exposures (CVE) exploitation and much more. Newly identified applications are then promptly added to the customer footprint, for comprehensive oversight. The network is then continuously scanned on a set schedule, to ensure the business doesn't have any cracks or oversights in their IT infrastructure/cybersecurity defense plan.

Additionally, Van Ausdall & Farrar, Inc. generates detailed technical and business reports, grouping applications based on their purpose within the customer's organization. These allow business owners to see which applications pose threats and which are less severe, so they can prioritize IT strategy effectively. These reports include custom business impacts influenced by the customer's Business Impact Analysis (BIA), providing a nuanced understanding of risk for their specific organizational needs. Threat intelligence, such as public exploits targeting identified vulnerabilities, outside an organization's firewall, further refines the risk assessment. This plethora of Custom Vulnerability Reports (CVRs) provide business owners with a combination of both business and technical insights, to ensure CEOs and CIOs can make informed strategic decisions.

The continuous monitoring feature ensures that scanning jobs run automatically according to a predefined schedule. This is important because it empowers organizations to customize scans based on specific needs, such as which ports to check and how often to scan. CVRs are automatically updated with any changes detected in the customer footprint, including updates from the global threat feed or internal network modifications - protecting the organization via internal data as well as external data. This proactive approach ensures that Van Ausdall & Farrar, Inc.'s clients are always protected against the latest threats from either side of the firewall.

According to IBM's "Cost of a Data Breach" report, the average digital incident costs \$4.45 million overall and \$3.31 million for companies with fewer than 500 employees.

<https://www.ibm.com/reports/data-breach> That cost is a 15% increase from 3 years ago. With rising costs, organizations simply cannot afford to endure a completely preventable breach.

"Van Ausdall & Farrar, Inc. is at the forefront in the technology industry at protecting our clients against cyber threats," said Les Royce of Van Ausdall & Farrar, Inc. "Our new vulnerability management solution not only secures our clients' networks but also ensures they can do so without incurring unnecessary capital expenditures. We proactively

manage our clients' technology so they can remain focused on growing their revenues, boosting their profitability and securing a competitive advantage in their industry."

ABOUT Van Ausdall & Farrar, Inc.

Van Ausdall & Farrar, Inc. is 110 year old Indiana-based

company whose mission is to provide value-driven technology solutions while delivering a world class customer experience and having a positive impact on the communities we serve. Bottom line, our vision is to implement technology to improve the human experience. We are an innovative provider of custom IT, security, communications, compliance and automation solutions. Offering

advanced technology know-how, Van Ausdall & Farrar brings innovative IT, workspace, cloud performance and hybrid solutions that help businesses simplify and leverage technology to meet specific objectives. To learn more about our products, services, and support please contact Van Ausdall & Farrar at 317-634-2913 or visit www.vanausdall.com
